# INTRADAY TRADING STRATEGIES

Nifty50, Banknifty, Options

Top Intraday Strategies In  
English Version

**written by mr ankya**

Hello Friends,

everyone wants to earn money from the market, everyone wants profit in the market but no one wants loss.

Friends, trading means buying and selling, it is not just that, very early traders just lose their capital in the pursuit of buy and sell, but if we do the same thing by studying, then we can get a lot of profit from the market, you should study it well. You will be able to get a good profit out of the market...

Somewhere many people also say that trading is gambling, my wish is trading is not gambling, first of all you should know that what is the difference between gambling and trading, friends, we do not know the meaning of gambling and we are doing that work. We can call it gambling and what we know we are doing we will not call it gambling

In Trade we can find out what the stock can do, it can be said that just we should know that when we will be able to do it, when we will work hard, then we are going to know the strategies in this eBook of today, so you should understand it better. And you have to train by doing paper trade, after that you have to enter the market, if you are a beginner, then you have to study for a month, after that you have to comfortably enter the market with small capital because friends, what a good strategy you have. If you do not have discipline and patience then you can never get money out of the market, you have to understand the market well, then give time to the market, see what the market does and study it, my wish is if you understand the market well, then at least work You will have to give time in the market for 2 years, it is not necessary that you have to do tr every day, so read this e-book very carefully, friends, you have to read this e-book well and not only have to read it also have to understand

Let's start...

# FIBONACCI STRATEGY

Friends our first strategy is base on fibo that means we will not use any indicator in s strategy solely price action is going to use here we , first of all you have to look at the below images carefully

Friends, this is the chart of the 15 minute time frame of banknifty, if we had entered at the beginning of the day, our capital would have doubled but how we can capture this momentum, we will know next

1ST 15 MINUTE CANDLE

Friends, as soon as the market opens, you have to let the first 15 minutes of candles close, that means the market has opened, whether there is a red candle or a green candle, just wait for it to close and like the first 15 minute candle is closed, there you have to Fibonacci is to be applied as given below

IMPORTANT LEVEL

IMPORTANT LEVEL

In this way you have to put Fib in the first 15 min candle as given below which is the first important level and high Pay or Dussehra important level as given below

**Friends, like hi necessary level break is there we can get a big momentum whether it is oh upside or downside, we just have to wait patiently and now we will understand the level of fibo..**

**( Level A & D ) :- Level A and D tells us about the momentum of the upside, if this break occurs then it means we can get the upside momentum, almost we can do 50 point expectation in banknifty or 30 point in nifty but the candle which is there is a and should close above A and D level**

( Level B & C ) :- Level B and C tell us about the momentum of the downside, if it breaks then it means we can get the momentum of a downside It should close below B and C level

---

( Level F ) :- Friends, Level F is very important level, if this level breaks in the morning itself, then here we can get a big momentum of upside.

Banknifty here has the power to double your capital, you just have to be patient to hold the profit.

---

( Level E ) :-Friends, this level is also the same as level F, if this break happens then you can get a big momentum of downside.

---

Friends, the way we have studied for Downside Momentum, you can try it in the same way in Upside, you have to understand the strategy and try

# SUPERTREND STRATEGY

Friends Supertrend is such an indicator which gives us buy/sell signal, there you also get all the fake signals but we can know which signal is right and which signal is fake, you just have to work a little hard in this strategy. You can make good profit from the strategy, just a little hard work and knowledge is required, you can use this strategy to trade options of banknifty nifty 50 So let's move on to our strategy

Friends, in s strategy we are going to use the same indicator which is named supertrend and we are going to use it in the chart of banknifty friends we are working in option then we have to see the chart of banknifty and there we have to see the 3 minute frame We have to use, we do not have to see the option chart here, only have to see the chart of Banknifty

www.investing.com A SATELITE

**Friends, in this strategy, you have to stay updated with the market news so that we know what is going on in the market, if the news in the market is negative, then we will get the momentum of downside in the market, if the news in the market is positive then we will get the momentum of the upside. is on the news**

Friends, here we are learning this strategy on nifty and banknifty and banknifty has the power to poach 100 calls up to 300-400.

Suppose there is some news in the market which can bring down the market, that means, it can bring down the BankNifty, then we will get the selling trigger as soon as we get the selling trigger, we will make a sell entry there.

Because we know the news in the market is negative If we got sell trigger then what can we buy there either we will buy PE there and short CE we can sell future also

Friends, this strategy is very simple, we just have to work with patience, if we enter and exit with 10-20 points, then it is very difficult to make money from the market then what should we do...?

Friends, whenever we enter a trade, we should keep a target of 50 points and stoploss should be 20-30 points.

Suppose you took your trade today, you placed a stop loss of 20 points and placed a target of 50 points and that trade was successful, then you took out 50 points from there.

Again you took the trade the next day and there your 20 point stop loss was hit, then you made 50 point profit on the first day today 20 point loss happened, even now you will still be in profit

If you are a beginner then you do not have to overtrade, if you have a loss of 500 today, then you will enter another trade to recover that loss, if your stoploss is hit there then your loss will increase then this is the solution Don't trade if stoploss is hit on that day

Friends, if the market gapup is open here, then should we trade here Friends, if the market gapup is open then it means that there can be an upside momentum in the market and the gap can also be filled but which is an important indicator of our strategy He is giving us a buy signal, so what will we do here?

Friends, I have told in the very beginning that we have to give more focus on the news, in this strategy, suppose the news in the market is negative but the one which is supertrend is giving us buy signal, then we will not buy or we will wait for sell trigger. When we will get sell signal in 3 minutes then we will enter there till then we have to wait

NIFTY BANK 3 NSE 03944.00 504970.70 1.2667500 C2074.50 -18.45 (-0.28%)

31440.90 0.00 31440.90

3

Friends, here we got the sell trigger, here we can enter for the sell side, so friends, how did we know this, from the news

NIFTY BANK 3 NSE 039325.45 439336.60 1.9300010 C3929.35 -1.45 (-0.01%)

31440.90 0.00 31440.90

3

GAP UP  
OPENING

Friends, as there was a gap up opening and the trigger that came was also true, it means the news is positive in the market and we got to see a good moment from the gap opening that Banknifty did.

**Friends, sometimes after the trigger of buying and selling, the market turns sideways, friends, there is no news in the market positive and not even negative, so there we get to see such a moment, friends, in this strategy, you should practice well. Have to do paper trade, then enter the market**

# SUPPORT AND RESISTANCE STRATEGY

Friends, we will call this strategy support and resistance strategy here we are not going to use any indicator just using price action this strategy you can use crypto in index in any stock. You have to practice by doing paper trade, after that if you want to try in the market, then let's start.

Friends, we will start this strategy from the basic, friends, the line drawn in the above chart, we will call it support, friends, what is support?

Support is the one that does not allow any stock to go down, if a stock is coming up by touching any level again and again, then it is its support as you have been told in the chart above.

RESISTANCE

Friends, the line drawn in the above chart, we will call it resistance, which means that a stock does not allow to go up, that means the stock is trying to go upside but that level is coming down from that level, we call it resistance. Now let's move on to our strategy

Friends, if any stock is coming down after being rejected from one level and coming up with support from one level, that means doing sideways momentum, then whenever the stock breaks the resistance or support level, then we can get a good momentum there.

**Friends, if any stock breaks any resistance level then your entry should be there immediately. We do not get the opportunity and the momentum goes out of our hands and if the stock goes up then we wait for it to come down but that stock does not come down and then we start feeling that if we buy here then our stoploss will be even bigger and the stock goes up and up**

**Friends, if there is a support break, then this question must have come in your mind that why we did not give entry level here...**

Friends, whenever there is a break of resistance level or support level in a stock, there comes a high volume with big candle and there was no momentum, friends, this thing is also to be noted that when resistance or support break then there comes a big moment

Trader98.com

Friends, the stock which is in the above chart is in a down trend and a support line is going upside down to support, now at which point I am going to understand you, note it carefully friends, if any stock has to go up then that Doesn't go straight upside, he first forms a base, creates a level, breaks the level after making a level, then after some momentum, again the stock comes around that level and after that the stock starts the journey of upside

In the above chart, the stock is in a down trend, after that a little upside momentum is seen taking support and as soon as the support is broken, the stock comes down.

How can we do this trade...

**Friends, you have to trade according to the above chart, now all of you must have a question in your mind that according to which we have set the target and stoploss.**

**Friends, the stock which is in the above chart was in a downtrend and the stock was moving up by respecting a support and as the support broke, the stock gave downside momentum, so what is the importance of taking a trade there.... (Support Break ) That's done and there we have entered for the bottom and we should have said stoploss, which was its first high, that stoploss is the best, that should be our stoploss**

# DOUBLE TOP STRATEGY

Friends, you can use this strategy in any stock index, crypto forex, all you have to do is to find the double top pattern, you have to use the 5-15 minute chart here and you can also use this strategy for swing trade long trade that's it. that time frame will be different

Friends, whenever we see a double top pattern like this, then we have to wait by drawing a level and we will enter the trade when our level is broken.

SUPPORT LEVEL

SUPPORT BREAK

SUPPORT LEVEL 2

Friends, in this way you also have to make the level in the double top pattern and you have to enter as soon as level 1 breaks.

Trader98.com

STOPLOSS

ENTRY

TARGET

### (Support Level)

Friends, whenever a stock goes upside , it does not go above a suddenly.

For example, if a stock moves upwards from one level, then that stock returns one more time around the same level and buyers enter somewhere there

**Q. Why Stock returns at the same level?**

**A. We are thinking of buying a stock at some level and there comes a good momentum from that level from a dam and there we miss that stock, so we can buy it that's why the stock returns once again. around that level**

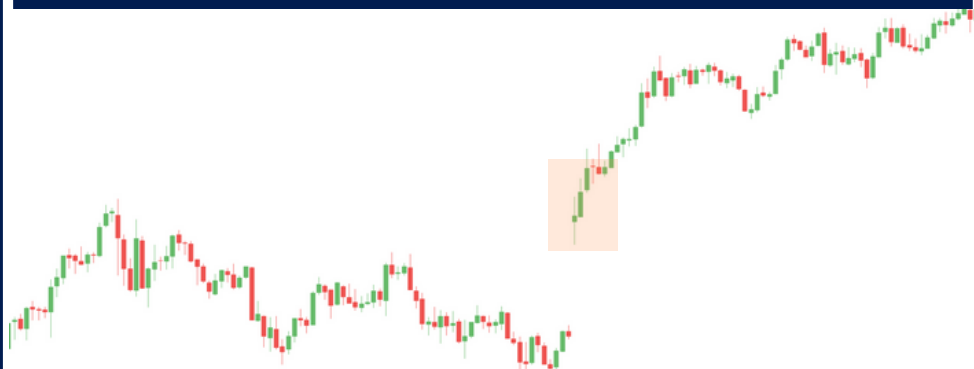

**And not only us, all the buyers make the same entry**

**Friends, you do not have to trade just by looking at the level that I have shared with you, you have to trade with a little too much and friends, no matter how big or small the trade is, we have to put stoploss**

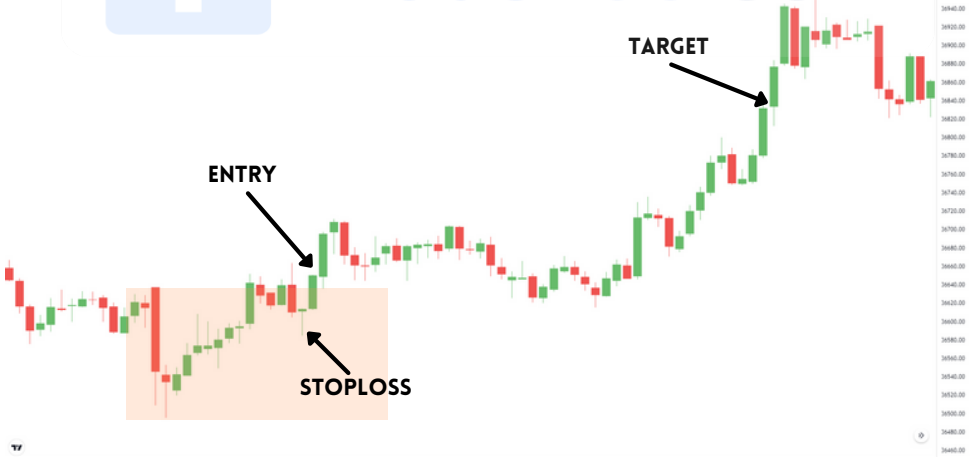

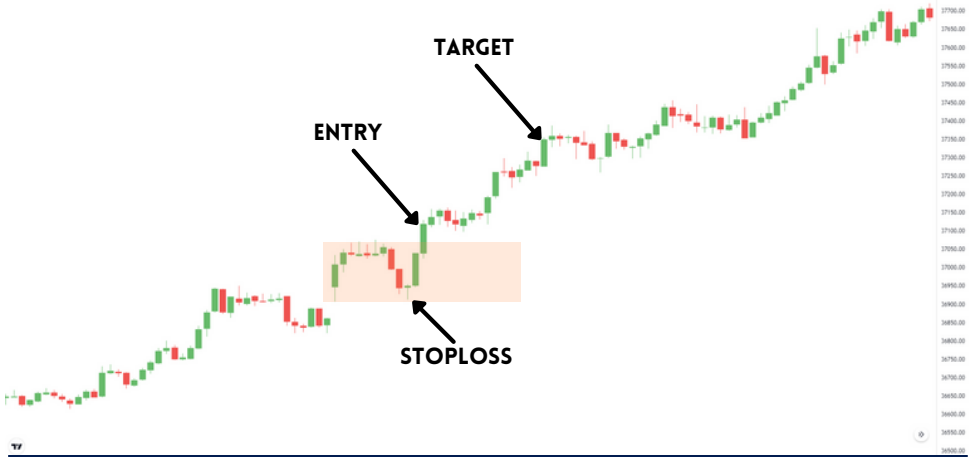

**Trader98.com**

As soon as three candles of five minutes close, it means that today we can get a good momentum as soon as the high of the third candle is broken, you have to enter the buy side as in the example given above

**Friends, most of the beginners say that it is very difficult to earn money from the market, they all are right because they are all beginners, they all have not studied well, I believe it is easy to withdraw money from the market, just we have a little understanding and trust in ourselves. should be**

**2 things are very important in the market**

**If patience and discipline is yours, then no one can stop you from earning money from the market.**

**Trader98.com**

# VOLUME PROFILE STRATEGY

Friends, in this strategy, we are going to use the same indicator, namely volume profile, friends, here we are also going to use price action, so here you have to work a little harder to understand this strategy.

Friends, here we are going to use 15 minute chart and we are going to use this strategy in stocks.

First of all you have to add volume profile indicator in the chart.

Friends, volume profile tells us that at which level the maximum buying and selling has happened, now you have come to buy and sell the most, we have to mark that level.

Friends, as soon as you have added the level, immediately remove the indicator, then wait for the confirmations. Now how to know if stock will go up or down it is simple to know when we will get higher high pattern then we can get upside moment in stock and when we get lower low pattern there we can get downside moment ok Now we will see example

Friends, in this strategy, we will enter the same where we will get higher high lower low pattern with higher volume, we will enter there as you are able to see in the above chart.

**Level :-** Friends, the level which we have come out, there was a big confusion, there was confusion because there was high buying selling and till the confusion is not cleared, the stock will move around the same level, when the confusion is cleared, then the stock will start making big movements. If the stock goes upside down it will form a higher high pattern and if it goes down it will form a lower low pattern

**Friends, the level of volume also acts as a support, if you miss your stock from any level, then you can wait there and buy from that level as you see in the above chart.**

**Friends, in the above chart you had a selling opportunity  
 Where we have created 2 levels there was also similar  
 confusion means buying selling came at that level after that  
 the stock made a lower low candle just here we found a sell  
 trigger**
